

FEATURES

The **Book Store Management System** provides several important features to ensure a smooth and user-friendly experience for customers, sellers, and administrators.

1. User Registration and Authentication

The system allows users to register accounts securely, log in with valid credentials, and authenticate their identity before accessing the platform. This ensures safe and personalized access to the bookstore.

2. Book Listings

The application displays a complete list of available books with details such as **title, author, genre, description, price, and availability status**. This helps users browse and explore books easily.

3. Book Selection

Users can select books based on different criteria such as **genre, author, ratings, and popularity**, helping them find books according to their interests.

4. Purchase Process

Users can add books to the cart, specify quantities, and complete the purchase securely. Once the purchase is completed, an order is generated and the inventory is updated automatically.

5. Order Confirmation

After a successful purchase, the system provides an order confirmation containing details such as book information, total price, and order ID.

6. Order History

Users can view past and current orders, track their purchases, and review their shopping history.

7. Seller Dashboard

The system provides a seller dashboard where sellers can manage books and related activities. Sellers can add new books, update book details, and maintain stock information.

8. Create Item / Manage Books

Sellers can create new book entries, add books to the platform, retrieve item details, and update existing books. This keeps the bookstore catalog up to date.

9. Admin Dashboard

The Admin Dashboard allows administrators to manage book listings, inventory levels, user accounts, seller accounts, and orders. It helps monitor and control all major activities of the Book Store application.

10. User and Seller Management

Administrators can manage both users and sellers, monitor account activity, and maintain platform security by handling access and platform-related operations.
