

ROLES AND RESPONSIBILITIES

The Book Store Management System includes three major roles: User, Seller, and Admin. Each role has specific responsibilities that help the system function effectively and provide a smooth experience for customers and platform managers.

1. User

The User is the customer who uses the Book Store platform to browse and purchase books.

Responsibilities of User

- Registration – Create an account by providing essential details such as name, email, and password.
- Profile Management – Update personal information such as name, email, and password.
- Book Browsing – Explore available books, browse different genres, and search for specific titles or authors.
- Book Selection – Select books based on interest, category, author, or price.

- Cart and Purchase – Add books to the cart, review selected items, and complete the purchase process.
- Order Tracking – View current and past orders through the order history section.
- Logout – Securely log out from the Book Store application.

2. Seller

The Seller is responsible for managing the books listed on the platform and processing customer orders.

Responsibilities of Seller

- Registration – Create a seller account by providing business details such as seller name, email, and password.
- Profile Management – Update seller information such as business name, email, and password.
- Book Listing – Add new books with complete details such as title, author, genre, description, price, and quantity.
- Book Management – Update book details, stock quantity, and availability status whenever required.
- Order Fulfillment – Process and ship orders placed by users in a timely manner.
- Inventory Maintenance – Ensure that book stock and availability are properly maintained.
- Logout – Securely log out from the Book Store application.

3. Admin

The Admin manages the overall platform and has control over users, sellers, books, and system operations.

Responsibilities of Admin

- System Management – Oversee all system functionalities, configurations, and platform security.
- User Management – Create, update, or delete user accounts and monitor user activity.
- Book Management – Add, update, or remove book listings from the platform when required.
- Seller Management – Approve new seller accounts, update seller details, and monitor seller activities.
- Order Monitoring – Monitor orders, purchase activities, and platform transactions.
- Platform Control – Ensure smooth operation of the Book Store system and maintain overall data consistency.
- Logout – Securely log out from the Book Store application.
